# lean

## The platform for lean physical security processes.

FLOW4SECURE - a state of the art software platform for rapid building and customizing of your business processes for physical security and workplace service delivery. The preconfigured standard applications are adaptable for most common use cases. We offer cloud or on premise installations as well as direct interfacing with physical security systems.

The easy deployment and the seamless integration with our Physical Security Information Management platform TERRA 4D makes it simple to combine your business to build a seamless flow for your physical security management.

# quality

Reliable quality through clearly defined digital processes.

A large amount of structured and unstructured data from several sources challenges large organizations and its staff every day. The avoidance of errors and inconsistent data through clearly defined process flows improves significantly the quality and security of your operations.

To meet regulatory requirements, data protection gets more and more important. FLOW4SECURE complies with General Data Protection (GDPR) and can be adapted to other regulations.

# individual solutions

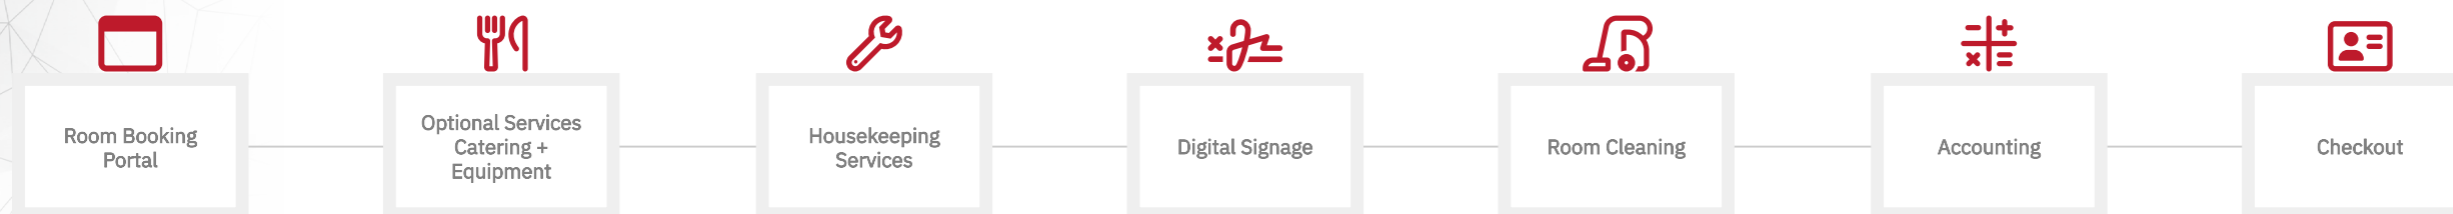

## Identity & Access Management

FLOW4SECURE Identity Management and Access Management offers a business process driven solution. The open architecture allows the integration of different access control systems including a fully digitalized workflow management.

## Resource Management & Booking

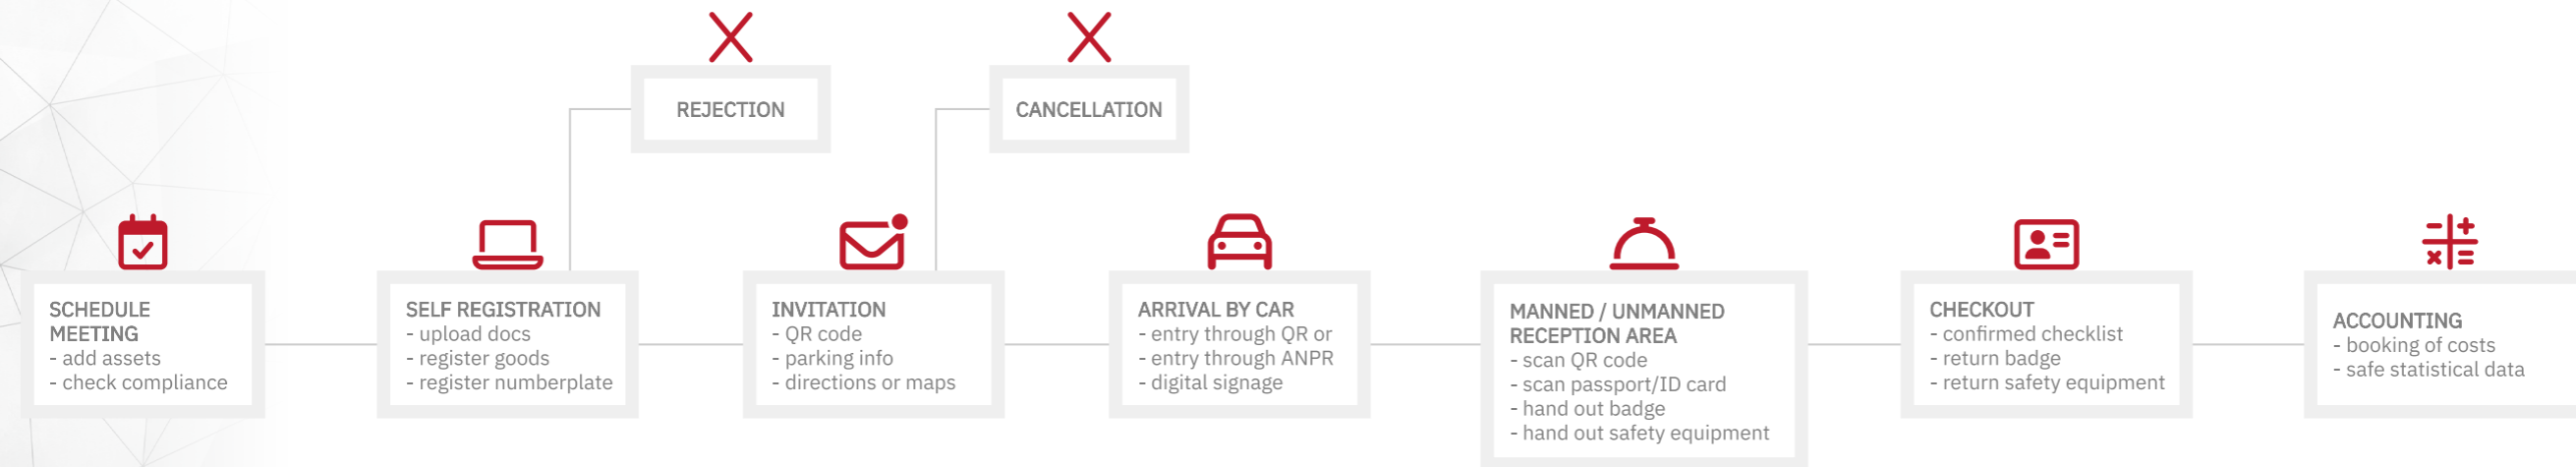

Plan, schedule and track your resources with the tailor-made FLOW4SECURE applications and workflows. The vendor-agnostic integration platform manages various resources within your organization and generates an added value for your business.

# Visitor Management

The integrated and secure approach to register, manage and track visitors are essential for the Visitor Management in smart

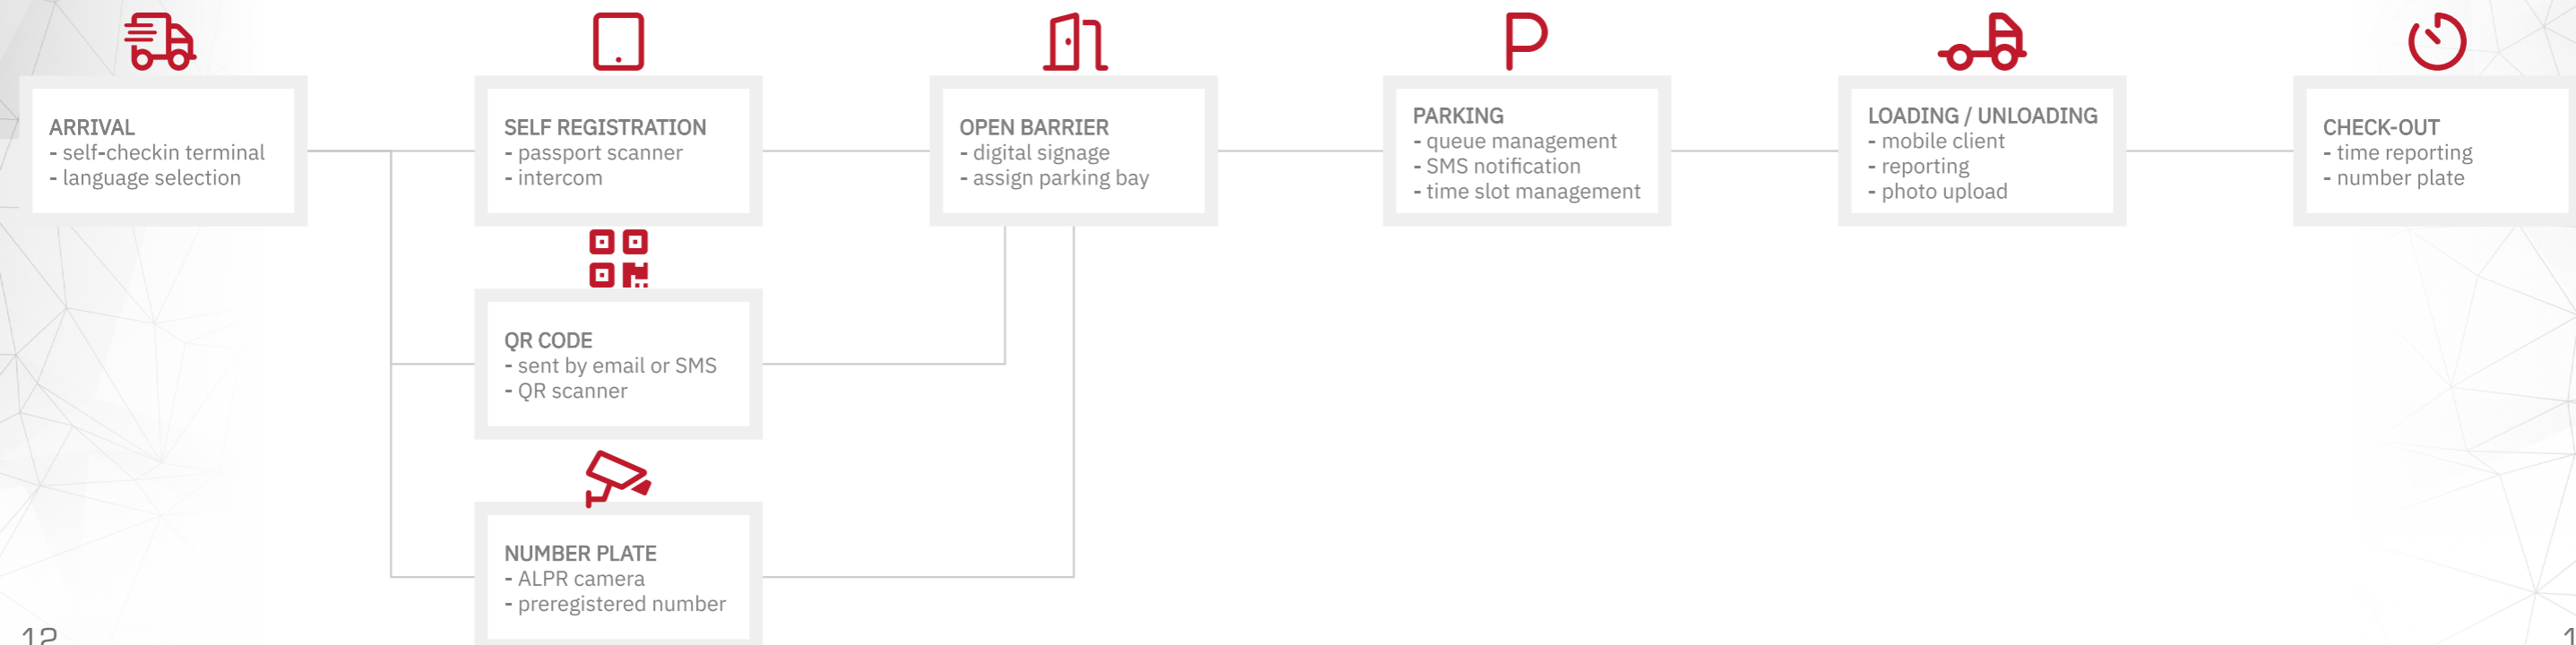

facilities. FLOW4SECURE drives operational efficiency and ensures the flexibility to quickly adapt to new operational requirements.

# Yard Management

Make your Yard Management easy and intelligent. FLOW4SECURE provides process automation tools to rout inbound and

outbound vehicles, personnel and shipments to the right and approved place in your yard.

# architecture

FLOW4SECURE - the smart platform which combines and synchronizes all your available and necessary data and information to provide you a unique benefit in operation.

# ROI

## Understand the profitability of your investment.

Reducing risks and avoiding mistakes can feel like a never-ending challenge. The complexity of business processes and workflows across dynamic environments with a diversity of platforms can be costly and labor intensive.

As a result, organizations are looking to implement automated processes and a stronger focus on digitalized workflows. We provide you a holistic software platform and integrate your existing systems and processes to increase your operational efficiency. This saves you money and reduces your environmental footprint.

Build as an umbrella system on top of your existing access control system, you can leverage state-of-the-art technology and introduce new service flow while maintaining your legacy hardware and extending the lifetime of your investment.

# services

## Your Efficiency is our Strength.

FAST Systems is a global acting company and pioneer in the field of digital security and surveillance technology. Public institutions, governmental agencies and enterprises trust our tailor-made software platform.

With our unique technology, we make business processes and workflows safer, more ecological and economical which minimizes risks and increases competitiveness.

Identify demands, requirements or challenges and define designated solutions

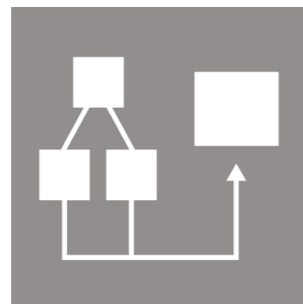

### Consultancy at its best

---

We take a holistic approach to manage your data and infrastructure to apply best to your process requirements.

Realize solutions based on our FLOW4SECURE software architecture

### As unique as your project – Solution Design

---

We provide to you a tailored solution utilizing our vast knowledge, industry expertise, concept of operational and system features. These can include an advanced sensor network, enrollment, access management, access operation and gate management.

Identify demands, requirements or challenges and define designated solutions

### Highly educated – Training

---

We train and certify your staff and our local partners for system implementation guaranteeing top standards.

1<sup>st</sup>, 2<sup>nd</sup> and 3<sup>rd</sup> level technical support

### Always at your service – Technical Support and Maintenance

---

Support is provided locally by certified partners offering a 24/7 hotline and 1<sup>st</sup> and 2<sup>nd</sup> level support. FAST Systems as developer and manufacturer is offering 3<sup>rd</sup> level support.

automated processes + digitalized workflows + open architecture + increased efficiency
